

PIUG 2019 Annual Conference Workshop

Title: Google Patents Public Datasets

Time and location:

Sunday, May 5: 8:00am – 9:00am; conference room to be determined

Abstract:

Join us for an introduction to the Google Patents Public Datasets. Google Patents Public Datasets is a collection of publicly accessible, compatible large datasets available for empirical public policy, economics, and machine learning research into the worldwide patent system. The data is available to be queried with SQL through Google BigQuery, joined with other public, paid, shared or private datasets you upload or purchase, and exported and processed using many other compatible analysis tools such as Tableau, Looker, iPython, R, KNIME, Google Data Studio and more.
